

NETWORKING THE SAFE PROGRAM

Workstations

User 1

User 2

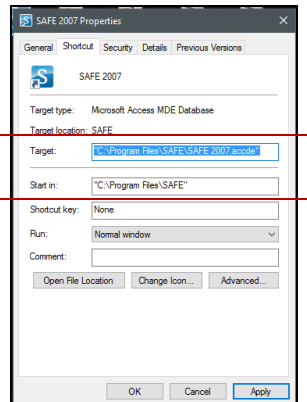

User 3

User 4

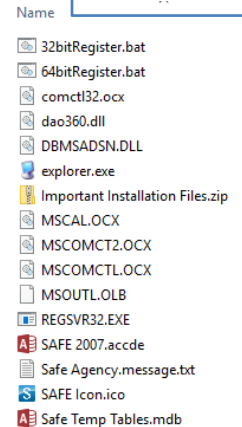

Important! The user needs the fastest and most direct access to the Server where the SAFE DB (Database) resides.

1. Each Workstation should have a C:\Program Files\SAFE folder that the user has FULL CONTROL on permissions in the Security Tab.
2. Each Workstation should also have a SAFE shortcut icon that has a target and a start in to their "C" drive location. (Shown here).
3. Each computer needs to make sure the "Important Installation files" are registered if they experience any issues (located in the C:\Program Files\SAFE folder).
4. Each Workstation should be LINKED to the Networked shared folder on the server

SERVER

"C:\Program Files\SAFE" folder contents for each workstation

This Server Location is where the following files should reside in a SHARED folder and FULL CONTROL Permissions for the user should be set.

- **SAFE DB.mdb**
- **SAFE Work.mdb**
- **SAFE TempTables.mdb (Only if you are a Health Department)**
- **Copy of the SAFE 2007.accde (if you are a Health Department)**
- **Copy of the SAFE.accde (if you are Private Company)**
